Readiness Review and Discrepancy Handoff

Learner packet | RR-01 | Proposed classroom exercise

You are the readiness reviewer for a fictional classroom event. At 1600 UTC on 22 October 2026, reconcile the supplied records and brief the Demo event lead. Your task is to preserve what the evidence says and route unresolved discrepancies.

Submit these products

A discrepancy log with source IDs, expected and observed values, impact and next action.

A handoff summary identifying a proposed owner, due date and acceptance request for each action.

A readiness recommendation under the supplied control rule, with the decision authority identified.

One HOPS or paper improvement record connecting an AAR, process correction and revised training task.

Working rules

Treat RR01 as the exercise requirement and decision-control card. RR03 establishes the observed inventory; RR04 establishes document revision state; RR05 establishes recorded handoff fields. RR02 is a compiled summary that must be reconciled with those sources. An absent entry is unknown, not permission to invent an accepted action.

Held items are not available. A proposed owner or date is not accepted until the source records acceptance. You may propose a reasonable follow-up, but label it proposed. Do not change observed counts, issue status or revision state to make the packet appear ready.

Exercise boundaries

All names, records, quantities and decisions are synthetic. No equipment is operated. The lesson does not authorize an event, approve a configuration, certify a learner or verify FleetVoice. Use the supplied documents only; no external technical research is required.

Assessment

The proposed rubric evaluates source traceability, inventory and revision reconciliation, handoffs, readiness disposition, communication and HOPS linkage. The evaluator will apply the criteria stated before the exercise. No score represents an operational qualification.

Learner name or classroom identifier

_____

Assessment date and evaluator

_____

Exercise control and compiled packet

RR01 Exercise control card

Issued 22 October 2026 at 1300 UTC. Review cutoff: 1600 UTC. Decision authority: Demo event lead. These are classroom administrative rules, not equipment operating limits.

Requirement	Required state
Support packs	8 available items. Held items do not count toward this number.
Control cases	2 available cases. Both must have documentation revision C.
Label kits	3 available kits.
Document sets	4 available sets.
Open issue control	Each issue needs an accountable owner, a due date and recorded owner acceptance.
Readiness recommendation	Recommend HOLD FOR REVIEW if a quantity, document revision or open-issue control is unresolved. Only the Demo event lead can make the event decision.

RR02 Compiled readiness packet

Compiled at 1400 UTC. Final review entry at 1540 UTC by Demo coordinator. The reviewer recorded the following summary without a later correction.

Item	Packet entry
Support packs	8 available; requirement met.
Control cases	CASE-A and CASE-B available; both at revision C.
Label kits	3 available; requirement met.
Document sets	4 available; requirement met.
Open discrepancies	0 requiring follow-up.
Final recommendation	READY. Event authorization remains with the Demo event lead.

Do not assume the final review entry overrides the underlying source records. Compare it with RR03, RR04 and RR05.

Observed inventory and document state

RR03 Signed inventory worksheet

Observed at 1500 UTC on 22 October 2026. Recorded by Demo custodian. The worksheet distinguishes total on hand from available stock; do not add held items to the available column.

Record	On hand	Available	Held	Recorded condition
Support packs PP01 to PP06	6	6	0	Available in the classroom inventory.
Support packs PP07 to PP08	2	0	2	Inspection hold in this synthetic record.
Control cases CASE-A and CASE-B	2	2	0	Both cases present.
Label kits LK01 to LK03	3	3	0	Available.
Document sets DS01 to DS04	4	4	0	Available.

RR04 Document revision register

Observed at 1510 UTC on 22 October 2026. The register records documentation state only; it does not direct a software update or equipment procedure.

Case	Observed revision	Required revision	Recorded action
CASE-A	C	C	No revision action needed.
CASE-B	B	C	Mismatch entered in issue H02. No later update recorded.

Review notes

Expected versus observed inventory state and source IDs

_____

_____

_____

Expected versus observed revision state and source IDs

_____

_____

Recorded handoffs and discrepancy log

RR05 Issue handoff register

Last updated at 1520 UTC on 22 October 2026. An intake receipt confirms logging only. It is not the same as acceptance by an accountable owner.

Issue	State	Owner	Due date	Acceptance record
H01 Support pack gap	OPEN	Not entered	22 Oct 1700 UTC	Intake logged; no owner acceptance recorded.
H02 CASE-B revision mismatch	OPEN	Demo documentation lead	Not entered	Owner acceptance recorded at 1515 UTC.

Discrepancy log template

Use additional copies if needed. Combining related findings is acceptable if each material fact remains visible and traceable.

Finding and source IDs	Expected versus observed	Impact and next action

Readiness recommendation

Recommendation and reason under RR01

_____

_____

Decision authority and unresolved conditions

_____

Handoff and improvement worksheet

Handoff summary

Issue or action	Proposed owner and date	Evidence and acceptance request

Brief in 60 seconds

State the recommendation, the material facts and source IDs, the unresolved conditions, and the requested owner decisions. Label proposed assignments and dates. Do not claim acceptance, closure or event authorization without evidence.

HOPS or paper improvement record

Use the public HOPS improvement loop, or complete these fields on paper. Select the process problem of late or inaccurate reconciliation. Keep stock and documentation gaps separate from the process correction.

AAR expected state observed state and proposed cause

_____

_____

Corrective process action owner date and observable criterion

_____

_____

Revised learning objective task and assessment standard

_____

_____

Review state: PENDING unless the evaluator supplies and records assessment evidence. A filled form alone does not pass a review. Record any simulated evidence as simulated.

Online example: https://seankaspar92.github.io/Portfolio/hops.html#improvement-loop. Browser records are local to that site; export the packet if you need to retain it.
